IVADAS

Darbo laiko kontrolei ir Scrum metodologijos įgyvendinimui naudojamas <u>www.easybacklog.com</u> siūlomas įrankis.

Praktinis darbas atliekamas C-sharp programavimo kalba, kuri sukurta kompanijoje Microsoft kaip dalis .NET iniciatyvos. Tai programavimo kalba, kuri paprasta, moderni ir sparčiai populiarėjanti tarp programuotojų.

Kadangi darbo užduotis yra sukurti programinę įrangą, kuri turi veikti internetinėje erdvėje, pasitelkiama ASP.NET tinklapio struktūros technologija, kurios pagalba, kuriamos dinaminės internetinės svetainės. ASP.NET technologija yra suderinta su bet, kuria .NET programavimo kalba, nes ji yra Microsoft .NET platformos dalimi.

Darbo problematika ir aktualumas

Kad galėtume tinkama realizuoti programą reikia tinkamai valdyti projektą, o tam reikalinga darbo laiko apskaita. Kurią realizuojame backloge.

Kad galėtume pažinti žmogų mes turime suprasti ką jis žino, kaip jis masto ir kuo domisi. Tik pažinodami žmogu galime identifikuoti jį ir į jį panašius žmones. Siekiant pažinti žmones yra kuriami įvairūs programiniai įrankiai.

Šiuo darbu siekiama sukurti tokį įrankį, kuris leistų paprastam interneto vartotojui sukurti savo profilį ir jo pagalba ieškoti žmonių, kurie yra į juos panašūs. Ateityje šis įrankis galėtų būti naudojamas statistinės informacijso surinkimo klausimais, nes vartotojai galėtų atsakinėti į klausimus iš karto. Esant pakanakmam vartotojų skaičiui iš karto būtų galima surinkti norimą informaciją.

Praktinė darbo reikšmė apima kelis aspektus:

- 1) Programuotojas atlikdamas uždavinį susipažįsta su lankstaus programavimo Scrum metodologija
- 2) Programuotojas atlikdamas uždavinį susipažįsta C# objektinio programavimo kalba. Susipažįsta kaip C# kalba rašomas ASP.NET kodas ir kaip jis integruojamas į html bylų formatą, kurio pagrindu kuriami žiniatinklio formos puslapiai.

Darbo tikslas ir uždaviniai

Pagrindinis darbo tikslas sukurti backlogą ir įvykdyti 5 sprintus, sukurti internetinį puslapį, kuriame vartotojas be didelių pastangų galėtų susikurti savo profilį atsakinėdamas į klausimus ir pats juos užduodamas Atlikdami darbą susiduriame su šiais uždaviniais:

- 1) Susikurti temas darbams;
- 2) Sukurti ir aprašyti darbus;
- 3) Priskirti darbus konkrečiam sprintui;
- 4) Įvykdžius sprintą jį uždaryti ir peržiūrėti progresą
- 5) Sukurti dinaminį interneto puslapį, kuris veiktų pagrindinėse naršyklėse;
- 6) pateikti vartotojui patogiai ir lengvai valdomą įrankį profilio sukūrimui;

Darbo struktūra

Darbas susideda iš šių skyrių:

1) Užduoties analizė. Šioje dalyje analizuojama, kokį įrankį pageidauja gauti vartotojas. Analizuojama kokie bus reikalingi darbai.

- 2) Sistemos architektūra. Aprašoma sprendimo projektavimo stadija, pateikiama darbo specifikacija;
- 3) Sistemos realizacija ir testavimas: Nuolat atnaujinamas backlogas, pasibaigus sprintams jie uždaromi. Pateikiama informacija susijusi su sukurtos įrangos realizacija, testavimu. Pateikiama sukurtos programos vizualiniai pavyzdžiai, kuriuose turi aiškiai matytis sistemos architektūros dalyje aprašytos funkcijos;
- 4) Išvados ir rezultatų apibendrinimas. Pateikiama analizė, kaip pavyko realizuoti užduotis, kurias susiformavome užduočių dalyje;

1. UŽDUOTIES ANALIZĖ

Pagal užsakovo užsakymą reikia sukurti internetinį tinklapį, kuriame turi būti galimybė vartotojams prisiregistruoti, užduoti po vieną klausimą į dieną ir atsakinėti į visus užduotus klausimus. Klausimai vartotojui turi būti parenkami atsitiktinai, jie gali kartotis.

Klausimai ir atsakymai turi būti talpinami duomenų bazėsė, kad esant reikalui vartotojas galėtų surasti atsakymus į klausimus, kuriuos jis uždavė.

Duomenims saugoti pasirenkama MSSQL server 2012 duomenų bazės, nes jos yra puikiai suderinamos su kitais Microsoft produktais naudojamais užduoties atlikimui. Tam kad būtų paprasčiau dirbti su duomenų bazėmis pasirenkame Entity Framwork duomenų valdymo karkasą.

Duomenų bazė valdoma SQL sintakse pasinaudojus LINQ biblioteka.

Vartotojai gali prisijungti tiesiogia prie tinklapio registruojantis arba pasinaudojant išrotinių paslaugų tiekėjų Google arba Facebook pagalbą. Registruojantis vartotojai turi parvirtinti savo tapatybę elektroniniu paštu išsiunčiant pranešimą. Pranešimas siunčiamas per SendGrid paslaugą.

Programavimas vykdomas C# programavimo kalba. Todėl internetinio tinklapio kūrimui pasitelkiama ASP.NET Rasor programinė sintaksė.

Sukuriamas backlogas, kuriame surašyti visi planuojami darbai:

Virtual I (Sn		•	· · · · · · · · · · · · · · · · · · ·			ocity: 8.0			
Theme	ID	User Story	Acceptance Criteria	Comments	Sprint	Status	Points	Cost	Days
Start page	STP1	As User	a) Email address and password is required				13.0	€163	1
		I want to login to the website	b) Login using the Free ASPSnippets Facebook						
		So I can access my account and use the support	API						
		features	c) Login is visible in the top header of the						
			website and is available after rolling over the						
			login button						
			d) Error messages must be shown if the email						
			address and password combination is incorrect						
			e) User can choose whether to remember his						
			password						
	STP2	As Admin	a) Admin is notified when a new user registers				5.0	€63	0.
		I want to login to admin site	on the site						
		So I can manage users who register for the	b) Users are told they are awaiting authorization						
		website	before the validation email is sent						
			c) Admin review users and remove them if it						
			needed.						
	STP3	As User	a) About Virtual I section is visible in the top-left				3.0	€38	0.
		I want to get to help page	header of the website						
		So I can get help	b) Information about project in upper part c) Help section in bottom part						
	STP4	As User	a) 4 first questions is provided step by step:				5.0	€63	0.
		I want to register on the website	name, surname, email, pasword						
		So I can access the user areas	b) Email address must be unique						
			c) Password must pass strong password						
			requirements						
			d) New registrations will send an email to						
			validate the email address is valid						
	STP5	As User	a) Visible down to login				2.0	€25	0.
		I want to recover the password	b) User must enter valid email address						
		So I can change password	c) New password page link will be sent to users						
			email						
			d) User must follow the link and change his password						
	STP6	As User	a) on the top of the page in the banner				2.0	€25	0.
		I want to can see quizzes available	suggestion to take part in quiz						
		So I can start quiz							
	STP7	As User Admin	a) link to help page				1.0	€13	0.
		I want to get help							
		So I can navigate to help page							

User page	USP1	As User	a) Upload up to 100 kb size picture		2.0	€25	0.2
		I want to upload my photo	b) Able to resize picture if needed				
		So I can see my photo	c) Able to crop picture to acceptable size				
	USP2	As User	a) 4 buttons on top navigation pane: Profile,		5.0	€63	0.6
		I want to see buttons So I can navigate further	connections, backpack, user b) Profile - navigates to answered question				
	USP3	As User	a) question always available in top of page.	Ling	13.0	€163	1.6
	0313	I want to see questions	Leftside	Ling	13.0	C103	1.0
		So I can answer them	b) question generated automatycaly				
			c) questions can be different type, so different				
			type answers needed (date, range, yes/no,				
			open, list)				
	USP5	As User	a) down to questions panel		5.0	€63	0.6
		I want to see question link So I can navigate to question page and create	b) red index shows if question is available				
		question					
	USP4	As User	a) Middle information about questions		21.0	€263	2.6
		I want to see connected people information	suggested, liked or created by connected users				
		So I can see what friends like	b) Possible to answer them directly				
			c) possible to share further to your connections				
			d) possible to comment				
			e) possible to recycle ()

Backpack page	BAP1	As User	a) statistic last 5 days	5.0	€63	0.6		
		I want to get to my questions	b) sell my question, suggest price					
		So I can see questions I asked and statistic	c) sell questions full ststistic, to other users					
	BAP2	As User	a) You can see all questions list	5.0	€63	0.6		
	I want to buy questions		b) can search					
		So I can get questions or statistic	c) can suggest price					
			d) price can be other question or free question					
	Total for theme 'Backpack page' 10.0 points / €125 / 1.2 days							
Database	DAT1	As User	a) Create login database	1.0	€13	0.1		
		I want to login to the website						
		So I can access my account						
	DAT2	As User	a) Create questions-answers databases	2.0	€25	0.2		
		I want to see questions						
		So I can answer them						
	DAT3	As Admin	a) load number of questions from database	2.0	€25	0.2		
		I want to get started quiz	randomly					
		So I can load questions for quiz	b) Loads then user push "start quiz" button					
	DAT4	As student	a) create repository in github	1.0	€13	0.1		
		I want to create repository	b) deploy project to azure					
		So I can share the project						
	Total for theme 'Database' 6.0 points / €75 / 0.8 days							
Servises	SER1	As Admin	a) In Service layer must be created algorithm to	8.0	€100	1.0		
		I want to get generated quiz	load quiz					
		So I can get full packaged quiz						
	Total for theme 'Servises' 8.0 points / €100 / 1.0 day							
Documentation	DOC1	As student	a) create report	13.0	€163	1.6		
		I want to create documentation						
		So I can remember system						
	DOC2	As User	a) Help page out of starting page and user page	8.0	€100	1.0		
		I want to get help	preferences					
		So I can see documentation, rules etc						
	Total for theme 'Documentation' 21.0 points / €263 / 2.6 days							
Total for back	log 'Vir	tual I'		180.0 points / €2,250 / 22	.5 days			
. Otta Si back				=======================================				

1.1.1. pav. Backlogas startinėje pozicijoje

2. SISTEMOS ARCHITEKTŪRA

2.1. Funkciniai reikalavimai

- Vartotojo prisijungimas naudojant grafinę vartotojo sąsają.
- Klausimų atsakymas grafiną vartotojo sąsają.
- Klausimų sukūrimas naudojant grafinę vartotojo sąsają.

2.2. Nefunkciniai reikalavimai

- PĮ turi būti realizuota grafinė vartotojo sąsaja pradiniams duomenims įvesti.
- Vartotojo sąsaja anglų kalba.
- Vartotojo sąsaja turi būti paprasta, intuityvi ir funkcionali.
- Programos reakcijos laikas turi būti priimtinas vartotojui. Jeigu reikalingas ilgesnis laikas atsakui pateikti (sudėtingi skaičiavimai), apie tai turi būti pranešama vartotojui ir pagal galimybę prognozuojamas atsakymo pateikimo laikas.

2.3. Duomenų bazės diagrama

2.3.1. pav. MSSQL Server suformuota duomenų bazės diagrama

2.4. Klasių diagramos

2.4.1. pav . UML Klasių diagramos

2.4.2. pav . UML Klasių diagramos

3. SISTEMOS REALIZACLIA IR TESTAVIMAS

Pavyko įgyvendinti du sprintus pilnai. 3.1. paveiksle pavaizduoti visi atlikti darbai.

Sprintas 2

USP2

ANP1

ADP1

Sprintas 1

Backlog: Virtual I STP1 Acceptance Criteria STP1 Backlog: Virtual I USP2 Acceptance Criteria a) 4 buttons on top navigation pane: Profile, connections, backpack, user b) Profile - navigates to answered question Theme: Start page 13 / 13 a) Email address and password is required Theme: User page 5/5 Login using the Free ASPSnippets Facebook API c) Login is visible in the top header of the website and is available after rolling over the login button d) Error messages must be shown if the email AsUser As User I want to login to the website I want to see buttons So I can access my account and So I can navigate further address and password combination is incorrect e) User can choose whether to remember his password use the support features Backlog: Virtual I Backlog: Virtual I USP3 Acceptance Criteria STP2 Acceptance Criteria Theme: Start page 5/5 a) Admin is notified when a new user registers Theme: User page 13 / 13 a) question always available in top of page. Leftside a) Admin is notified when a new user registers on the site b) Users are told they are awaiting authorization before the validation email is sent c) Admin review users and remove them if it needed. b) question generated automatycaly As Admin As User o) question generated automatycaly c) questions can be different type, so different type answers needed (date, range, yes/no, open, list) I want to login to admin site I want to see questions So I can manage users who So I can answer them register for the website Backlog: Virtual I Backlog: Virtual I STP4 Acceptance Criteria Acceptance Criteria a) 4 first questions is provided step by step: name, surname, email, pasword b) Email address must be unique c) Password must pass strong password requirements d) New registrations will send an email to validate the email address is valid Theme: Start page 5/5 Theme: User page 5/5 As User I want to register on the website I want to see question link So I can access the user areas So I can navigate to question page and create question Backlog: Virtual I Acceptance Criteria STP5 Backlog: Virtual I ANP1 Acceptance Criteria a) Visible down to login b) User must enter valid email address c) New password page link will be sent to users Theme: Start page a) create question you like b) only unique questions, shows green pointer on the right Theme: Question page 8/8 As User AsUser c) question must be reasonable (used only words from loaded words database email d) User must follow the link and change his I want to recover the password I want to ask for a question So I can change password So I can have ability to ask question Acceptance Criteria Backlog: Virtual I DAT1 Acceptance Criteria Theme: Database a) Create login database Theme: Database 212 a) Create questions-answers databases I want to login to the website I want to see questions So I can access my account So I can answer them Acceptance Criteria Backlog: Virtual I ADP1 Acceptance Criteria Theme: Database 1/1 a) create repository in github b) deploy project to azure Theme: Admin page a) Get all questions b) have possibility delete if needed As Admin I want to create repository I want to see questions lists So I can share the project So I can remove any if needed Acceptance Criteria Backlog: Virtual I ADP4 Theme: Admin page As Admin I want to see new connections So I can manage them Acceptance Criteria Backlog: Virtual I ADP5 ADP5 Theme: Admin page a) List of all users b) Remove if needed As Admin I want to see all users So I can manage them

Sistemos realizavimas ir testavimas atliktas. Internetinis tinklapis buvo užkrautas lokaliame IIS serveryje MS Windows 7 operacinėje sistemoje.

Įrankis buvo sėkmingai išbandytas. Klausimus sukurti pavyko, atsakyti į klausimsu pavyko. Vėliau duomenys buvo sėkmingai iš duomenų bazės paimti ir panaudojus gautus rezultatus atvaizduoti tinklapyje. Sudarytas testavimo planas buvo sėkmingai įvykdytas.

Pavyko nustatyti programos stipriąsias ir silpnąsias puses.

3.1. Vartotojo sąsajos realizacija

3.1.1 pav. Pradinis langas

3.1.2 pav. Prisijungimo langas

3.1.3. pav. Vartotojo langas

V ~ I	Profile	Connections	BackPack	Loged in as marjuz	Log off
		Ope Clo Rar Dat	sed ge min Value min max Value max		
© 2015 - Virtuall					

3.1.4. pav. Klausimo langas

3.1.5. pav. Vartotojo langas sukūrus vieną klausimą

3.1.6. pav. Visų vartotojo atsakytų klausimų sąrašas

Šešiuose paveiksluose pateiktas visas kelias, kuris buvo realizuojamas testuojant sukurtą įrankį. Pradžioje buvo prisijungta, iš vartotojo lango sukurtas klausimas, klausimas detalizuotas, grįžta į vartotojo puslapį. Daugiau užduoti klausimų nėra galimybės. Atsakyta į klausimus ir gautas visų atsakymų sarašas.

3.2. Sistemos realizacija

Programos veikimui būtinos bibliotekos:

- duomenų bazės valdymui panaudotas atvirojo kodo karkasas Entity Framevork;
- SQL užklausų rašymui panaudotas LINQ (Language Integrated Query), kuris yra Microsoft .NET Framework komponentas.
- Vartotojo sąsajai kurti panaudotas ASP.NET Razor programinė sintaksė;

Sistemos stipriosios pusės:

• Irankiu paprasta naudotis;

- Patogi klausimų uždavimo, atsakymo sistema, nors ir nėra realizuotas įvairiapusiškesni klausimų formatai. Pvz. Paveikslėlio įkėlimas;
- Visi veiksmai su informacijos apdorojimu atliekami pastebimai greitai;
- Vartotojas gali matyti visus savo atsakymus;

Sistemos silpnosios pusės:

- Nėra realizuota atsakymų perkėlimo išorinį diską sistema;
- Nėra galimybės bendrauti tarp pvartotojų ar ieškoti vartotojų;
- Trūksta interaktyvių funkcionalumų;
- Vartotojo sąsaja neišbaigta ir nėra interaktyvi.

3.3. Sistemos testavimas

Planas:

- Patikrinama ar veikia prisijungimas;
- Patikrinama ar įmanoma pasiekti informaciją be vartotojo prisijungimo;
- Patikrinti ar veikia visos nuorodos;
- Patikrinti ar galima atsakyti i daugiau nei du klausimsu per dieną.
- Patikrinama ar galima atsakyti į skirtingus klausimus;
- Patikrinama ar galima gauti visų klausimų sarašus;

Testavimo duomenų rinkiniai:

- Prisijungiama vartotojo vardu marjuz@gmail.com;
- Užduotas klausimas Where is Germany?;
- Atsakyti į visus pateiktus klausimus;

Testavimas atliktas Windows 7 operacinės sistemos aplinkoje. Naršyklė, kurioje peržiūrima vartotojo sąsaja Google Chrome Version 47.0.2526.80. Duomenims duomenų bazėje saugoti panaudotas www.azure.com duomenų sandėlis. Duomenų bazių valdymui panaudota MSSQL server 2012 duomenų bazių valdymo sistema.

4. IŠVADOS IR REZULTATŲ APIBENDRINIMAS

4.1. Rezultatai

Darbo metu pavyko susipažinti su Scrum metodologija, nors pavyko įgybvendinti tik 2 sprintus iš planuotų 5.

Darbo metu pavyko susipažinti su C# programavimo kalbos pradmenimis.

Atlikus du sprintus pavyko sukurti be kritinių klaidų veikiančią programą, ką ir numato Scrum metodologija.

4.1.1. pav. Sprintų įvykdymo grafikas ir tendencija

4.1.2. pav. Sprintų įvykdymo grafikas

4.1.3. pav. Taškų skaičius sprintui

4.2. Išvados

- 1) Įvykdyti du sprintai. Pavyko susipažinti su Scrum metodologija, pavyko susidaryti darbų planą ir juo vadovaujantis sukurti be kritinių klaidų veikiančią programą.
- 2) Programą pavyko sėkmingai ištęstuoti;
- 3) Interneto tinklapiu naudotis patogu, nors ir trūksta funkcionalumo;
- 4) Internetinis puslapis gali būti pasiekiamas adresu https://virtualizer.azurewebsites.net/;
- 5) Internetinio puslapio programos kodo URL http://virtualizer.azurewebsites.net/Images/virtualizer.rar
